How many people know how to build AI systems? **5,000** (actively publishing research [Element AI]) **22,000** (PhD-educated AI researchers [Bloomberg]) **90,000** (upper bound on number of people [Element AI])

3.6M (Number of software developers in the US) **18.2M** (Number of software developers in the world)

Sources: The AI Talent Shortage (Nikolai Yakovenko) https://medium.com/@Moscow25/the-ai-talent-shortage-704d8cf0c4cc Just How Shallow is the Artificial Intelligence Talent Pool (Jeremy Kahn) https://www.bloomberg.com/news/articles/2018-02-07/just-how-shallow-is-the-artificial-intelligence-talent-pool

Full Stack Deep Learning (March 2019)

The Al Talent Gap

- **10,000** (estimated num people with the right skillset [Element AI])
- 200,000 300,000 (Number of Al researcher / practitioners [Tencent])

Pieter Abbeel, Sergey Karayev, Josh Tobin

4

The AI talent gap

Fierce competition for AI talent

"Everyone agrees that the competition to hire people who know how to build artificial intelligence systems is intense. It's turned oncestaid academic conferences into frenzied meet markets for corporate recruiters and driven the salaries of the top researchers to sevenfigures."

(Bloomberg)

Full Stack Deep Learning (March 2019)

Pieter Abbeel, Sergey Karayev, Josh Tobin

Fierce competition for AI talent

"Hiring is crazy right now. ML is a young field that got popular very quickly. There's a ton of demand and not a lot of supply."

(Computer Vision Engineer at Series C startup)

Full Stack Deep Learning (March 2019)

The Al talent gap

Pieter Abbeel, Sergey Karayev, Josh Tobin

The AI talent gap

Fierce competition for AI talent

"Hiring for ML is really challenging and takes way more time and effort than we expected. We have someone working on it full-time and we're still only able to get a few people per quarter"

(Startup Founder)

Full Stack Deep Learning (March 2019) Pieter Abbeel, Sergey Karayev, Josh Tobin

Most common ML roles at companies?

- DevOps
- Data engineer
- ML engineer
- ML researcher
- Data scientist

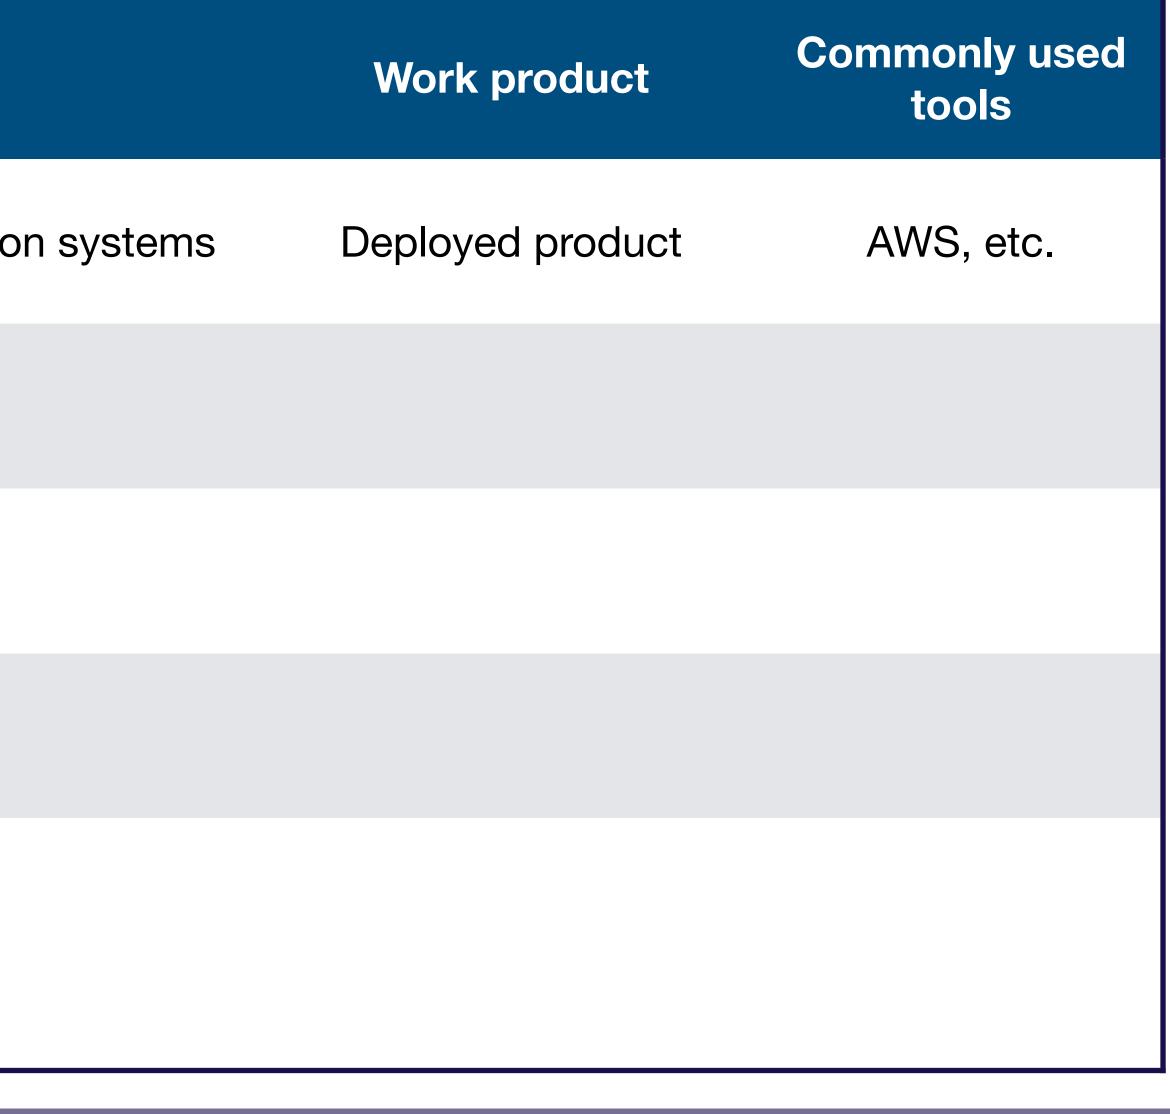

Full Stack Deep Learning (March 2019) Pieter Abbeel, Sergey Karayev, Josh Tobin

What's the difference?

Role	Job Function
DevOps Engineer	Deploy & monitor production

Full Stack Deep Learning (March 2019)

Pieter Abbeel, Sergey Karayev, Josh Tobin

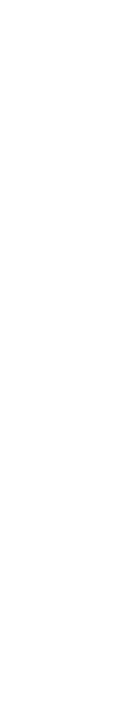

Role	Job Function	Work product	Commonly used tools
DevOps Engineer	Deploy & monitor production systems	Deployed product	AWS, etc.
Data engineer	Build data pipelines, aggregation, storage, monitoring	Distributed system	Hadoop, Kafka, Airflow

Full Stack Deep Learning (March 2019)

ML team structures - lessons learned

No consensus yet on the right way to structure a ML team

Full Stack Deep Learning (March 2019)

Pieter Abbeel, Sergey Karayev, Josh Tobin

ML team structures - lessons learned

- Most believe in a mix of SWE and ML skillsets on the team
- Many think everyone on the team needs some level of SWE skills
- Different views on **ML researchers**
 - Some think they are hard to integrate with SWE teams
 - Others think deep ML expertise is necessary to move fast
- Different views on data engineering
 - Sits with ML team in some orgs
 - Others think it should be a separate team ("data warehousing")
 - Some think it's also important to have **dedicated data labeling** (e.g., building labeling tools & managing outsourced labelers)

Pieter Abbeel, Sergey Karayev, Josh Tobin

It's hard to tell in advance how hard or easy something is \bullet

Full Stack Deep Learning (March 2019)

Pieter Abbeel, Sergey Karayev, Josh Tobin

- It's hard to tell in advance how hard or easy something is
- ML progress is nonlinear
 - Very common for projects to stall for weeks or longer
 - In early stages, difficult to plan project because unclear what will work
 - As a result, estimating project timelines is extremely difficult
 - I.e., production ML is still somewhere between "research" and "engineering"

Full Stack Deep Learning (March 2019) Pie

Pieter Abbeel, Sergey Karayev, Josh Tobin

- It's hard to tell in advance how hard or easy something is
- ML progress is nonlinear
- There are cultural gaps between research and engineering
 - Different values, backgrounds, goals, norms
 - In toxic cultures, the two sides often don't value one another

Full Stack Deep Learning (March 2019) Pi

Pieter Abbeel, Sergey Karayev, Josh Tobin

Where to look for ML / data science jobs?

- Apply directly to companies you're interested in
- On-campus recruiting (for those in school)
- LinkedIn recruiters (for more experienced)
- Recruiting fairs at ML conferences (NIPS / ICML / ICLR / etc.)
- This course!

Full Stack Deep Learning (March 2019)Pie

Pieter Abbeel, Sergey Karayev, Josh Tobin

What to expect in the interview process?

- Much less well-defined than software engineering interviews
- Common types of assessments:
 - Background & culture fit
 - Whiteboard coding (similar to SWE interviews)
 - Pair coding (similar to SWE interviews)
 - Pair debugging (often ML-specific code)
 - Math puzzles (e.g., involving linear algebra)
 - Take-home ML project
 - Applied ML (e.g., explain how you'd solve this problem with ML)
 - Previous ML projects (e.g., probing on what you tried, why things did / didn't work)
 - algorithms)

Full Stack Deep Learning (March 2019)

• ML theory (e.g., bias-variance tradeoff, overfitting, underfitting, understanding of specific

Pieter Abbeel, Sergey Karayev, Josh Tobin

How to prepare for the interview?

- Prepare for a general SWE interview (e.g., "Cracking the Coding Interview")
- Prepare to talk in detail about your past ML projects (remember details, prepare to talk about tradeoffs and decisions you made)
- Review how basic ML algorithms work (linear / logistic regression, nearest neighbor, decision trees, k-means, MLPs, ConvNets, recurrent nets, etc)
- Review ML theory
- Think about the problems the company you're interviewing with may face and what ML techniques may apply to them

Outline

- **Problem setup** (e.g., for a particular problem, what data would you look for, what model would you choose, and what metric would you optimize?)
- Algorithm knowledge (e.g., how does an LSTM work?)
- Understanding of commonly conventions (e.g., what problem with RNNs does an LSTM solve?)
- ML theory (e.g., understanding bias and variance)
- ML debugging (e.g., what's likely to cause the bug here?)

Full Stack Deep Learning (March 2019) Piet

Pieter Abbeel, Sergey Karayev, Josh Tobin

vanishing gradient problem?

Full Stack Deep Learning (March 2019)

Example question 1

• Why does the Residual Block in the ResNet architecture help with the

Pieter Abbeel, Sergey Karayev, Josh Tobin

Example question 2

- Suppose you see the following learning curve when training on a single batch. Which of the following could be the cause? (Select all that apply)
 - Shuffled labels
 - Learning rate too low
 - Learning rate too high
 - Numerical instability
 - Too big a model

Pieter Abbeel, Sergey Karayev, Josh Tobin

Example question 3

- For each of the following prediction tasks, select the loss function that is best suited for it.
- Predict sale price of a house listed for sale.
- Predict whether an image contains pornography or not.
- Predict the category of an email: personal, promotional, reminder, or spam.
- Predict whether a voice sample belongs to the owner of the phone.

- (a) Mean Squared Error (b) Categorical cross-entropy (c) Binary cross-entropy (d) CTC loss
- (e) GAN loss
